

Vammass

The VAMMAS CSB3600 Compact Sweeper Blower is designed for usage on taxiways and narrow apron areas. Due to the short length and rear torsion axle, which may be directed opposite to the front axle, or in the same direction as the front axle, CSB3600 is highly maneuverable.

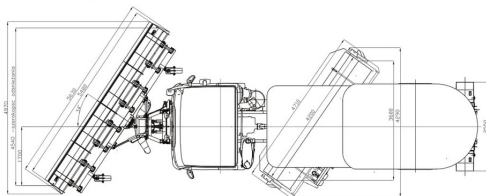

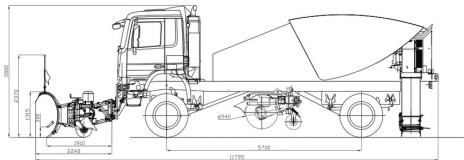

CSB 3600

CSB 3600

CSB3600 has the ability to work simultaneously plough, brush and a blower

Technical specification

Chassis	Mercedes Benz Actros 2032 A 4x4
Engine EURO 6	MB 235 KW
Wheel base	5700 mm
Broom core length	4,25 m
Total length in working position	11,80 m
Total width in working position	4,97 m
Broom working width (35°)	3,44 m
Swing angle left and right	35°
Caster wheels ,automatic adjustment optional	2 pairs 8,5 cu m/s
Air flow	400 km/h
Air speed at nozzle Recommended max. Working speed	40-60 km/h
Voltage	24 V

- Construction equipped with rotating roller brush unit, positioned behind the rear axle and high efficiency air blower having blowing nozzles to the left and right side of the machine
- Working engine power 260 hp with flame starting system
- Cylindrical brush with cassette system of segments of maximum diameter 940 mm
- Blowing channels behind the brush

- Working brush equipped with guards to eliminate the deposition of snow on the brush
- Turbine (blower) high-performance soundproof, with a hydrostatic drive by a working engine with air ducts for air supply to the blower nozzles.
- Automatic brush pressure to the surface along with its control
- All functions can be regulated and controlled from the cab.
